

# AFL 1

## Web Design and Development

---

### Instruction

- Before you start, please extract "**AFL1.zip**" file into your computer.
- Rename the folder to "**AFL1-[ Your NIM]**".
- Work directly on each of those folders.
- You are prohibited from changing, adding or removing anything in the index.html file, unless requested.
- Read all the questions, then do the one you think is easiest first.

#### 1. [30 points] – CSS Layouting

- Go into the "**Question 1 – Layouting**" folder.
- Modify the **style-1.css** file so that the appearance of **index-1.html** is appropriate with **result-1.jpg**

#### 2. [25 points] – Media Queries

- Go into "**Question 2 - Media Queries**" folder.
- Modify the **style-2.css** file so that it looks like the **result-2.jpg** image if the browser has a width below 500px.
- You **MUST** use **media queries**.
- The initial display if the browser width is more than 500px is already in **index-2.html**, you only need to add the proper media queries.
- Small size images of people have also been provided in the **images** folder.

#### 3. [25 points] – CSS3

- Go into "**Question 3 – CSS Animation and Transition**" folder.
- Modify the **style-3.css** file so that there are animations and transitions like in the video in this folder (**result-3.mp4**).

#### 4. [20 points] – Forms

- Go into "**Question 4**" folder.
- Modify the **index-4.html** file and create a form like the **result-4.jpg** file. Make sure the appearance of your form is as similar as possible to the example.
- Adjust the input type according to your needs.
- The form can only be submitted after filling in the name, password and confirm password, filling in the appropriate email, and age filling in a number. In terms of gender, male is **automatically checked**.
- This form will be submitted to the **handler.php** file WITHOUT displaying parameters in the URL.
- Don't forget to give a name to all input so it can be submitted.
